

Date and time variables

Date and time variables

Date and time variables

A special type of categorical variable are those that instead of taking traditional labels, like colour, they take dates and / or time as values.

- Date of birth ('29-08-1987', '12-01-2012')
- Date of application ('2016-Dec', '2013-March').
- Payment date ('29-08-1987 15:20.20')
- Time of accident (12:20:45)

Date and time variables

Pre-processing

We can enrich the dataset dramatically by extracting information from the date and time.

We will see how in a dedicated section of this course!
